AGITATION DEFOAMER

Control Foaming Naturally

Agitation Defoamer is a fast acting liquid defoamer used at pump-out for preventing and reducing foaming during liquid manure handling, increasing slurry tank capacity and overall pumping efficiency. This product can also be used in methane foaming pits.

ATTRIBUTES:

- All-Natural Plant Based Oil
- Environmentally friendly product and an alternative to diesel fuel
- Increased Manure Hauling Capacity by 3%-7% on average with increases up to 50% in problem barns.
- Reduces cost of labor and hauling
2-4 less loads per 1200 head barn
- Most cost effective defoamer in the industry.

WHEN TO USE:

- During agitation to knock down foam
- To increase tanker capacity
- For easier manure handling
- To control foaming naturally
- Fast Acting. Observed reducing foam in as fast as 10 minutes after application.

DIRECTIONS:

- Apply 1 gallon of Agitation Defoamer per 75,000 - 100,000 gallons of slurry
- Apply evenly across the entire pit, through the slatted floor or through the pump out port
Product can take up to 30 minutes to activate
- Can also be used in the manure tankers

Storage:

Store in original container in a safe, cool, dry place and out of direct sunlight.
Store at temperatures over 32°F. Do not let freeze.
