

# Intra Hoof Care Protocol Guidelines

Healthy hooves start with a solid plan - your herd's health depends on it!

## Scientific Proven Preference

Individual application

**Day 0**  
Hoof Trimmer

**Day 3 + 7**  
Hoof Trimmer

Group application

### Bath

2 consecutive days (morning & evening), every 2 weeks

### Spray

2 consecutive days (once per day), every 2 weeks on all back feet

## Practical Alternative

Individual application

**Day 0**  
Hoof Trimmer

**Day 3 + 7**  
Farmer

Group application

### Bath

1 day per week (morning & evening)

### Spray

Once per week on all back feet

## Is your herd under stress?

If switching from harsh footbath products, set your cows up for success with our 4-week Intensive Protocol. This program helps strengthen and protect their hooves, ensuring a smooth transition:

- ✓ **Footbath:** 2 days per week (morning & evening)
- ✓ **Spray:** 2 times per week on all back feet.

After treating individual lame cows, this herd-wide protocol supports long-term hoof health, ensuring your cows stay comfortable and productive.

**Tip:** Set young stock and dry cows up for success with weekly Intra Hoof Sol Spray sessions—a small step in prevention that makes a big difference in hoof health!
