

AGRI

INCINERATION SYSTEMS

Trusted Worldwide

WHY INCINERATION

Biosecurity

Incineration can effectively eliminate pathogens, viruses, and disease-causing organisms present in pig carcasses. This helps in preventing the spread of disease

Rapid Disposal / Cost

Incineration provides a quick and Cost efficient way to dispose of pig carcasses. Where composting can take weeks and months to complete, Incineration can take a matter of hours

Odor Control

Pig carcasses can emit strong odors during decomposition. Incineration dramatically reduces these odors

Space Efficiency

Incinerators require less physical space compared to composting facilities or storage areas for collected carcasses

On-site Disposal

Incinerators offer the advantage of onsite disposal, minimizing the need for off-farm handling and reducing the exposure to 3rd party bio- security hazards

REASONS TO CHOOSE AGRI INCINERATION SYSTEMS

13 pre-engineered models in our standard agricultural range to suit any & every agricultural waste type and size of operation.

All models supplied with secondary chamber as standard, ensuring they conform to legislative bodies around the world.

Our market leading low thermal mass monolithic concrete lining is used in all our models.

WE NEVER USE BRICK.

State of the art robust control panel containing a host of industry first features.

Counter balance/slide lids/front loading for ease of use giving full access to the loading chamber.

All our incinerators can be loaded whilst in operation.
